

Background

Cedar Park High School is part of the Leander Independent School District - among Texas' fastest-growing school districts – welcoming more than 1,700 new students this school year as they surpass 21,700 total students.

The Challenge

The goal of Cedar Park High School was to find and implement a computer-based training solution for use in its teaching classrooms. "I was frustrated with trying to keep students from getting distracted while working on the computer. Also I was looking for a way to demonstrate programs and software to all the students at the same time" remarked Computer Science Teacher, Galen Goodreau. "My idea was to find some sort of "lab monitoring" software that would allow me to help guide the students."

Situation

The school reviewed a few different software options and selected NetSupport School. The key features that differentiated NetSupport School were ease of implementation and use, the ability to show teacher's screen to student screens, view multiple student screens for monitoring, chat and file distribution so instructors could send out files and collect course work at the end of class.

"I chose NetSupport School because of its many excellent features. Also that it did what I call "basic" features better than any other piece of software and it has many "extra" features that the others did not."

NetSupport Solution

"Since I have installed the NetSupport School software, my students have increased their productivity in terms of staying on task and working on their programs. Also I have been able to do in class demonstrations of programs for the students which has led them to have greater understanding of some of our more challenging topics" states Goodreau.

"The software was implemented at my own school, but since then I have recommended it to my entire district and the software is being implemented throughout the district (3 high schools) on around 400 machines. NetSupport School has proved to be invaluable in my classroom. I could not have nearly the results that I have had without it."

Testimony

I have seen huge productivity gains in the amount of work that my students have been able to accomplish through my "gentle" reminders to stay on task using the software.

Many students have also commented that they enjoy of the software because of the fact that I can help them faster and more efficiently with their problems which in turn helps them with their productivity."
