

Background

Freedom Area High School is part of the Freedom Area School District – serving the communities of Conway, Freedom and New Sewickley in Beaver County, PA. Freedom High School has 600 students and has launched a technology initiative to build classrooms for the future.

The Challenge

The goal of Freedom Area High School was to find and implement a computerbased training solution for use in its teaching classrooms. In the 90s, they had used a hardware based solution but found it complicated and cumbersome. FAHS needed to find a better way to monitor kids on the computers and put in place a more efficient solution to aid in computer learning. The solution had to work in multiple classrooms and different learning scenarios in various subject areas.

Situation

The school researched the internet and discovered NetSupport School. The most important features of NetSupport School were ease of implementation and use, the ability to show teacher's screen to student screens, view multiple student screens for monitoring, chat and file distribution so instructors could send out files and collect course work at the end of class.

NetSupport Solution

Since we have implemented NetSupport School, we have seen an increase in productivity in the classroom as teachers can now gauge a student's progress and get to more students by broadcasting the correct way to do something. By giving our teachers a centralized way to interact with and support with our students in the computer lab, we are enhancing the learning process and allowing teachers and students to focus on the content of the curriculum instead of technology-related issues.

Testimony

"We believe that NetSupport School is an excellent first step towards integrating technology in the classroom. Its remote monitoring and screen sharing capabilities really enhance the learning and teaching experience."

- Matt Scala, Technology Coordinator, Freedom Area School District, Freedom, PA
