

Background

Vicksburg Community Schools has 100 employees and 25 computers.

The Challenge

This is a new cad/cam lab serving students from 9th to 12th grade. The problem was students not staying on task to complete necessary assignments. The obstacle that we faced was how to control individual computers and help all students in this lab. The idea we had was to explore what software was available to help guide students in the right directions.

Situation

We installed new cad/cam PCs in the Machinetool Lab. We considered two other software vendors for this project but NetSupport School fitted the bill better than the others. Currently we have installed 25 seats of NetSupport but hope to install more in the near future.

NetSupport Solution

As mentioned above, the quiz/survey feature was extremely important to us. Once we had used it in the demo version, we knew it was something we did not want to be without. Also, NetSupport School is extremely easy to learn for non-technology related teachers.

Lab teachers are ecstatic with the possibilities of NetSupport School. For the first time, they feel like they are really in control of the lab and student work.
