

Background

Christ's College is a state comprehensive secondary school in East Finchley, London, United Kingdom. It falls under the London Borough of Barnet Local Education Authority. It is a boys' school up to and including Year 11, and the sixth form is mixed, admitting up to 25% girls. The school presently has 967 students. The school is specialised in Maths and IT.

The Challenge

As Senior ICT Technician, Shoab Nasir explains, students can be very adept at finding 'weak points' in a computing environment: "While technology and the internet opens up many learning possibilities, it can equally be very frustrating when students decide to use the equipment for their own means. We therefore needed a solution that helped us stay one step ahead of our tech savvy students!"

NetSupport Solution

"Since installing NetSupport School we have been able to monitor exactly what the students are doing and this has brought a great deal of focus to our ICT lessons. While the software provides tools that enable teachers to focus their time and attention on the students learning needs, the great thing for me as the ICT Technician is that it also provides dedicated Tech Tools that make the management of our ICT infrastructure far easier. The Technician's Console gives me a view of every PC in the school so I can easily identify what is happening and if needed take remedial action. Remote support can be given to any student or teacher machine.

"I can perform an instant hardware or software inventory, see in real-time, and interact with the applications, website activity, services and processes running on each PC and using the file distribution feature, I can quickly and silently distribute files or folders from my PC to any number of selected computers.

"All in all, NetSupport School has proved to be a real asset."
