

Background

Since opening in 1971, more than 1.3 million students have improved their lives through the education and training obtained from Houston Community College. The college are committed to meeting the needs of the city's diverse communities, providing academic courses for transfer to four-year institutions, terminal degrees and certificates in more than 70 fields of work, continuing education and corporate training.

The Challenge

The college library has a classroom with 30 computers and needed teaching aids but the room was not designed for a central screen. A tool that helped share information between computers was the answer and NetSupport School fitted the bill.

NetSupport Solution

NetSupport School has proved beneficial for many Higher Ed institutions and Librarian Marcia Braun outlined how the solution has facilitated better use of Houston College's PCs.

"NetSupport School has proved an excellent tool for keeping students focused on what is being presented to them. For example, rather than hoping they show an interest in what is displayed on a whiteboard at the front of the room, the tutor can show their screen directly onto the students desktops, freezing their keyboard and mouse at the same time. The product goes further in that a piece of work on a student screen can also be displayed around the room making NetSupport School an ideal collaboration tool for group working."

"For those of us who have to look after the Library PC's day in day out there are a number of time saving admin options and a real bonus for me is the ability to automatically Power On and Log On all computers from my machine at the start of the day. And the reverse at the end of the day."
