

## Background

King's College - NetSupport School

Founded in 1946 by the Congregation of Holy Cross from the University of Notre Dame, King's College is a liberal arts Catholic college located on a small urban campus in Wilkes-Barre, Pennsylvania.

## The Challenge

"Most of my classes are in a lab in which each student has a PC. The challenge was to prevent students from using email, from browsing the internet and from using software that they should not be using during class."

## The Solution

"Using NetSupport School, I have been able prevent students from using email, from browsing the internet and from using software that they should not be using during class. I have also been able to monitor the students' PCs when they work on their projects."

NetSupport is also useful when I give hands-on exams. During the exams, I can watch what the students are doing on their PCs and I can also make sure the students are logged in as themselves so they cannot get a file from another student's network drive. I have been very happy with the NetSupport product." - Associate Professor of Computers & Information Systems

"I have been able to use NetSupport School as a tool to deploy software packages in the labs throughout campus. This is done by utilizing the "execute at client" task to send a batch file to multiple computers at once. This function has made software removal, upgrades, and installs quicker and easier." - IT Support Staff, King's College
