

Moravia Park Elementary School

▾ The Challenge

"I have a classroom of 32 computers that I was going to be using with roughly 600 students over the course of a school year and I needed a way to help manage/monitor my students more effectively than constantly pacing around the room. I wanted a way to prevent my students from printing 30 copies of a document without having to unplug the printer. I wanted a way to limit what the students could do while using the computers but also add tools to help the students be successful. My idea was to find a classroom management solution that would help me achieve these tasks and more.

I began searching for classroom management software by doing some searches on the internet. I tried several free 30 day trials ranging from SMART SynchronEyes, Vision, NetOp, and finally NetSupport School. After comparing the features of each of these products I found NetSupport School to be the best choice for my classroom as it had the most features and worked faster and with fewer problems than the competitors. I have now been using NetSupport school on the 32 student workstations in my elementary computer lab with students in grades pre-K through four. It is working great and my classes are running more smoothly, I am able to have a faster turnaround between classes, and the students love some of the features like announcements and being able to sign in on the register.

▾ The Solution

NetSupport School has allowed me to achieve many of my desired outcomes in a quick and hassle free manner. I am now able to distribute and collect student projects with just a few clicks of my mouse. I no longer waste 15 minutes in the morning turning on each computer in my class and logging them on. I am able to remotely turn on and off the student computers as well as sign in under 90 seconds. The time I am saving allows me more time to prepare other aspects of my lesson without having to worry about the technical obstacles. The students are more productive as a result of the NetSupport School tools as well. I am able to redirect activities and broadcast example screens to their computer in a matter of seconds allowing me to easily demonstrate key concepts without students being distracted by games or the web.

NetSupport School works better than I could have imagined, I am able to keep students on task and classroom disruptions to a minimum. This software is the perfect solution for any computer lab and I can not imagine trying to meet the needs of my classroom without it." - Technology Teacher
