

Background

Valdosta High School has won a national-record 816 games in 92 years, giving the South Georgia city of 45,000 its identity as "Winnersville, USA."

The Challenge

To improve student achievement by offering a variety of instructional methods, monitoring student work and progress, and limiting the use of certain computer programs (such as the Internet).

Situation

Students use computers each day to complete their assignments. Students would rather "surf" the net than complete the work assigned to them in class. This has become a major problem in the computer areas. Student achievement suffers tremendously when students are not actively engaged in the learning process. Teachers have the ultimate responsibility of monitoring students. Teachers simply cannot be everywhere at once to help deter inappropriate computer usage.

NetSupport Solution

The MOST useful feature is the ability to restrict use of certain programs (such as the Internet). Actually, the test designer, monitoring features, and lock down features are awesome too! It is such an easy program to install and use. The greatest benefit is to monitor student's computers and restrict the use of programs while instruction is taking place. We have also been able to find new ways to instruct students. For example, we can show class notes to all students on their own computers. We have also been able to reduce the time grading tests by using the test designer. It grades the tests for us. Support from NetSupport is great too. By keeping closer tabs on students' computers, we have fewer technology problems. This makes our technology repair technicians very happy!
