

↳ Background

The days of a blackboard, chalk, and a simple calculator for math class are long gone. At least in Worth County.

Worth County Middle School is stepping up its technology to help students learn. The school will receive over \$96,000 to start more 21st century learning environments. Those are classrooms that incorporate technology into every aspect of a lesson.

The students will also get new projectors and laptops as part of the grant. Five additional 8th grade math classrooms will have the new technology next school year.

↳ The Challenge

"I needed to be able to keep students' attention when demonstrating and teaching. Due to the computer lab set up, I can not see their computers nor monitor what they are doing. I knew that monitoring software was available; I just had to be sure I would get the best product."

↳ Situation

"I also looked at GenevaLogic's Vision Software, because I used it at another school. However, NetSupport School has many more features like print monitoring and test designer. I really like the idea of giving "online" tests without really being 'online'."

↳ NetSupport Solution

As far as productivity goes, NetSupport has given me a greater degree of classroom management and given my students more time on tasks.

My experience with NetSupport has been wonderful. The support team gave me immediate support when I had an installation issue and they followed up very promptly.

↳ Testimony

"As far as productivity goes, NetSupport has given me a greater degree of classroom management and given my students more time on tasks." - Business and Computer Science Teacher
